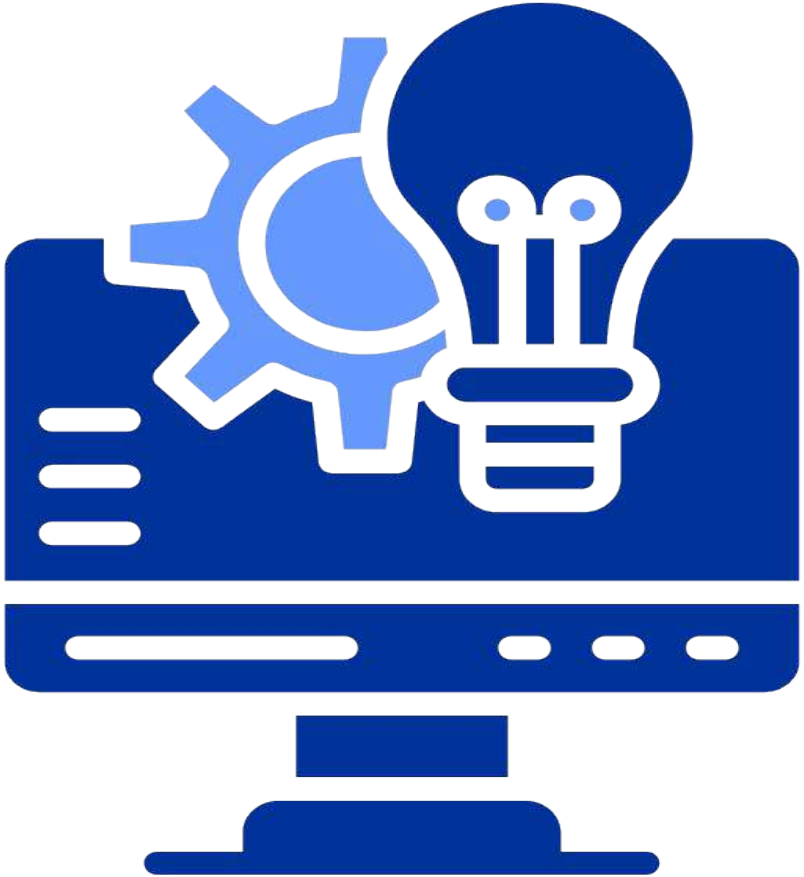
Outline

- Abstract of the Project
- Problem Statement
- Proposed Solution
- System Architecture
- Live Demo of the Project
- Embedded Video of Project
- Conclusion
- Future Scope



Abstract

1. Project Overview

This project focuses on building a professional Sales Performance Dashboard that transforms raw, unorganized business data into actionable strategic insights. By replacing manual reporting with a dynamic Power BI ecosystem, it enables real-time tracking of revenue, budget attainment, and individual salesperson performance across multiple branches.

Abstract

2. Objective & Purpose

- To automate reporting – Replacing manual data interpretation with a dynamic Power BI system.
- To monitor real-time KPIs – Tracking revenue, budget targets, and salesperson performance instantly.
- To identify business trends – Using data visualization to predict growth and solve real-world sales problems.
- To make decisions smarter – Empowering managers with accurate insights to improve strategy and performance.

Abstract

3. Tools and Technologies

Microsoft Excel – Data cleaning, structuring, and preliminary analysis.

Power BI – Data modeling, DAX measures, and interactive dashboards.

Chatbots (ChatGPT) – Business logic refinement and technical troubleshooting.

GitHub Copilot – DAX formula optimization and workflow automation.

Abstract

4. Expected Outcome

100% Data Transparency

Instant KPI Tracking

Reduced Reporting Time

Optimized Resources

5. Key Highlights

Data-Driven Sales Strategy

Budget Accountability

Operational Efficiency

Problem Statement

Core Problem: Current sales reporting relies on static, manual spreadsheets that are slow to update and prone to human error, making it difficult to get a real-time view of business health.
Why it Matters: Without automated tracking, management cannot quickly identify which branches are underperforming or which products are driving the most revenue, leading to missed targets and inefficient resource allocation.

Problem Statement

Target Domain: This affects Sales Managers and Auditors who need precise, daily data to monitor salesperson contributions and ensure the company stays within its financial budget

Limitations of Existing Tools: Traditional Excel files lack interactivity and visual depth, making it hard to compare "Actual vs. Budget" figures or perform deep-dives into specific product trends.

Problem Statement

Project Scope: This project is limited to transforming one year of raw transaction data into a centralized, automated Power BI dashboard to solve the gap between raw data collection and strategic decision-making.

Proposed Solution

The Solution: An automated Power BI Sales Intelligence Hub that consolidates fragmented branch data into a single, interactive source of truth.

How it Solves the Problem: Eliminates Manual Error: It replaces static, manual Excel reporting with automated data cleaning and modeling, ensuring the revenue figures ($1.79M) and quantities sold are 100% accurate. Enables Proactive Decision-Making: By using dynamic "Revenue vs. Budget" visuals, it allows managers to instantly identify underperforming branches and redirect resources to ensure the organization meets its 104% budget attainment goal.

Proposed Solution

Methodology & Steps:

Data Structuring: Cleaned and organized raw transaction records using Microsoft Excel to ensure data integrity.

Power BI Modeling: Established relationships between sales, products, and budgets to create a centralized database.

DAX Development: Wrote advanced formulas for real-time tracking of revenue, quantity, and budget variance.

Al Optimization: Leveraged GitHub Copilot and Chatbots to refine technical logic and automate reporting workflows.

Proposed Solution

Key Benefits

Instant Accuracy: Replaces slow, manual reporting with automated visuals that ensure 100% data reliability. Real-time Auditing: Allows managers to compare "Actual vs. Budget" performance instantly to prevent revenue loss. Strategic Growth: Identifies top-performing salespersons and products to help the business scale effectively.

System Architecture

Data Input / Source

Raw business records including Salesperson IDs, Manager tags, Product Categories, and Budget targets.

Processing / Analysis

Data cleaning and normalization in Microsoft Excel, followed by complex relationship modeling in Power BI

AI / Tool Integration

Implementation of advanced DAX measures assisted by GitHub Copilot and logic validation via Chatbots.

Output / Dashboard

A multi-page interactive reporting suite featuring high-level CEO summaries and granular Salesperson deep-dives.

Live Demo of Project

Here's the list of some demo screenshots / features of the project:

Demo 1

OrderDate	OrderNumber	ProductKey	SalespersonKey	Salesperson	Supervisor	Manager	Channel	Quantity	UnitPrice

Conclusion

Project Accomplishment: Successfully transitioned manual sales tracking into a fully automated Power BI Intelligence Dashboard, providing a "single source of truth" for business performance.

Key Findings: Achieved a 104% budget attainment, with total revenue reaching $1.79M. Identified Carla Ferreira as the top-performing salesperson ($4.7M contribution).

Objectives Achieved: All core objectives automating reports, tracking real-time KPIs, and enhancing decision-making were fully met using advanced DAX and AI integration. Overall Value in this project proves how combining B.Com (AFI) auditing principles with Data Analytics can eliminate manual errors.

Future Scope

Predictive Forecasting: Using AI to predict future sales trends based on current performance.

Geographic Expansion: Adding branch-wise location data for regional performance mapping.

Live Data Automation: Connecting to live business databases for real-time reporting.

Cost Auditing: Integrating expense tracking for a full profit-and-loss analysis.
