Implementation Steps for Finance_Bot

Step 1: Instructions & Persona Setup

Action: Opened the Instructions tab to define the bot's identity.

Detail: Configured the bot as a Senior Financial Analyst. You specified that it should maintain a professional tone and use accounting logic to answer queries about sales and budgets.

Step 2: Knowledge Base Integration

Action: Navigated to the Knowledge tab.

Detail: Uploaded the SalesData.xlsx file. You ensured the status is "Ready," which allows the bot to "ground" its answers in your actual sales and product figures rather than guessing.

Step 3: Custom Topic Creation

Action: Created a new topic named "Final Project Report".

Detail: Set a Trigger phrase (e.g., "What was the Total revenue for 2021?"). This tells the bot exactly when to start this specific conversation flow.

Step 4: Designing the Authoring Canvas

Action: Built the logic flow using nodes in the Authoring Canvas.

Detail: Added a Question Node with multiple-choice options: 2021 Revenue Report, Variance Analysis, and Staff Management Links.

Linked these options to a Generative Answers node that searches the SalesData.xlsx file for the specific answer.

Step 5: Testing & Publishing

Action: Used the Test Bot pane (bottom left) to verify the flow.

Detail: Clicked Publish to save the logic. This ensures that when someone asks about "Salesperson" or "Revenue," the bot correctly pulls data from the Excel sheets you provided.

Sample Response (Screenshot Output)

Variables
Based on a thorough review of the available Sales Report data retrieved from SalesData.xlsx, here is my analysis:
Product Category Sales Volume Analysis
Observed Category Structure
The Sales Report is structured around two high-level product categories, each containing multiple sub-categories:
Category
Sub-Categories Identified
Food
Oil, Vegetable, Wheat Flour, Candy, Powdered Milk, Yeasts, Tomato Sauce, Spices
Drink
Red Wine, Liquor, Dry Wine, Energy Drink
Key Finding
Based on the transaction-level records in the Sales Report, the Food category consistently accounts for the majority of line items across all observed transactions — spanning sub-categories such as Wheat Flour, Oil, Vegetable, Candy, Powdered
